

⇒ space → ~~fractal~~ effect
It will highlight curvature of an object

Float value(x) = 0
(can ↑ ↓ the curvature effect)

⇒ Create (fractal color) Parameter in blackboard

⇒ Create (fractal power) float in Blackboard

(1) → by clicking on it node

Setting will be direct set

Default(x) = 3

// Connect fractal power with Power(1) in fractal effect

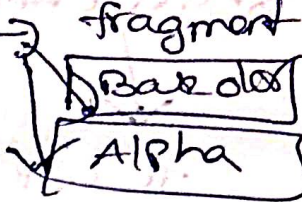

Change color mod default to HDR in
N. Settings & keep color white

⇒ fractal effect (act) → multiply (B input)
fractal color → (A) multiply

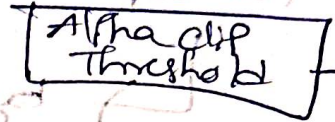

can ~~add~~ Add Shader → material

⇒ Add material to the Graph.

can multiply → is used to perform
transformations, lighting calculations,
texture blending & color adjustment

→ then ~~add~~ Multiply out () → 

→ Change Fresnel color (Parameters) Graph settings
as transparent (Surface type) & Allow
Material override ☒ which give new
option in Fragment

 → (0)

→  → upto here the glow
will increase

in Fresnel color (Node settings)

↓
Color (HDR)

↳ HSV white

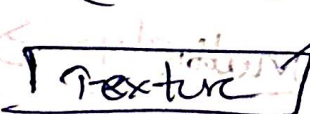

Intensity in color (should

be ↑)

→ Create a Textured 2D Parameter on blackboard

known as ScanLines Texture

→ connect it (space) Sample Textured 2D

↳ 

click space \rightarrow Add

connect (Sample Texture 2D RGB) \rightarrow TO Add (B
:P)

$\&$ Multiply (out) to Add (A :P)

\Rightarrow Now Add (out) \rightarrow Base color $\&$ Alpha

\Rightarrow Add texture to graph

Select Scanline texture \rightarrow In node settings assign

the texture $\&$

assign to material also.

\Rightarrow Create Scan Lines Tiling $\&$ Scan Line speed which
Parameter comes under \rightarrow vector 2

for graph line texture
Speed in
hologram.

\Rightarrow space \rightarrow Tiling $\&$ offset node \Rightarrow

connect Scan Lines Tiling to
tiling of (Tiling $\&$ offset
node)

Correcting offset to UV of sample texture
 (1) correct (sample texture) to correct

2) select the material of (two) phylum 3

Adjust the Scanline texture $x: 1 \quad y: 32$
 Scanline speed $x: 0 \quad y: 8$

Apply texture to object

Select scanline texture

the texture of

material of object
